

ETHEREAL SMILE

TOOTH JEWELLERY AFTERCARE

Don't touch or play excessively with your gem, it may feel like something foreign in your mouth at first but that feeling will subside.

Don't eat for 2 hours after application, for the next 12 hours, it's advised that you eat softer food on the opposite side of the mouth. **Long term, how you eat is how you will look after your gem.**

You may drink, kiss and smoke immediately after.

Don't brush your teeth for 12 hours & use a soft bristled toothbrush to help your gem last as long as possible.

The same way saffron rich food, red wine or cigarettes can stain the teeth, they can also stain the dental bond, ensure you keep up with regular oral hygiene.

Our adhesive is dental grade, the same used to apply braces. If you lose a gem, please ask your dentist to remove the bond before reapplication if any is still intact with the tooth.

Tooth Gems are completely reversible & can be removed at your dentist with a simple scale & polish, don't remove yourself. For the crystal to last as long as possible, you must be mindful.
